Prior Art

**Fig. 7: An Exemplary 6-node Power System**

Prior Art

**Nodes: 1, 2, 3 are PQ-nodes; arrows extending outwards L1, L2, L3 are connected loads including Electrical Motor loads**

**Nodes: 4 and 5 are PV-nodes, where equivalent plant generators G4 and G5 are connected**

**Nodes: 6 is the reference/slack/swing node, where equivalent biggest plant generator G6 is connected**

**T1 and T2 are tap-changing Transformers controlling voltages of nodes 1 and 2 respectively**
